

SOCIAL RESPONSIBILITY & Environmental Consciousness

The same way of individuals, we believe that businesses are accountable for fulfilling civic duties too. What does it mean? There's a balance between economic growth and the welfare of society and the environment. If this equilibrium is maintained, then social responsibility is accomplished.

How does it work? We comply social responsibility requirements and pursue the idea of a sustainable growth by two directions. The first one is implicit in our business mission: to **develop facilities able to recover from waste every single element which can be re-employed in life and economic cycles**: until 100% of industrial or household waste is not returned to the availability of humans and groups for their daily needs, our mission won't be considered as accomplished. The second one belong to our business behaviour. **We stated** that each decision we can make, as well as each action we undertake, must be **ethically validated before proceeding**. If the action or decision may cause harm to society or the environment, then it would be considered to be socially irresponsible and then rejected.

About Us

Vitone Eco is the industrial heritage from a family of very ambitious entrepreneurs who, in lands mainly farmed by olive trees, more than one century ago, started manufacturing olive presses for local olive oil makers.

A few years later than the Company foundation, our machines were being exported worldwide. To adapt to the changes gradually occurred to its related competitive arena, Vitone Eco has successfully experienced a market-development strategy. Due to the stock of knowledge handed down by their olive-presses-focused ancestors, the Company inheritors have expanded business into technologically comparable fields, such as avocado oil, bio-energy, recycling and sludge dewatering. Nowadays Vitone Eco builds horizontal axis centrifuges (decanters) and vertical separators, to separate many different kinds of fluids and remove the solid part. The Company products range includes poly-preparation systems and screw conveyors.

Why choose Us

01 Business Longevity

We have built separators since 1904 and during our centennial history we have successfully implemented our separations technologies to many different fields (such as food&beverage, pharmaceutical, cosmetic, bio-energy) before expanding to sludge dewatering.

02 Global Reputation

We operate worldwide. We went global just a few years later than the Company foundation and currently we supply customers from around 50 different countries.

03 Worldwide Prompt Service

We guarantee around-the-clock assistance, even from remote, everywhere the customer's facility is located. We assure training and support in both pre and post-sale, transparency and confidentiality.
